TECHNICAL SKILLS

HTML5   CSS3   Javascript   Node.js   React.js

Express.js   Rest APIs   MySQL   ES6

PROJECTS

Cryptonite 🔗
- Cryptonite is a cryptocurrency blockchain emulation and website utilizing the MERN stack. My team of four peers created this application that allows users to purchase, trade, and store Cryptonite coins.
- I was responsible for implementing the Stripe API that facilitates purchase transactions on the application by processing credit card information.
- I utilized the Chart.js package to display the coin's real time data. The real time data is being gathered from the blockchain and pushed to the graph using the useState React hook.
- https://github.com/LiamStewartDev/Cryptonite-Cryptocurrency-Utilizing-MERN

FarQuest 🔗
- FarQuest is a role-playing/choose your own adventure game that my team of 3 peers developed. A user can create an account, create a character, and play through our story that has various paths and outcomes.
- I was responsible for gathering all of the visual assets for the application. This included many individual files as well as the RpgUI visual asset package.
- I assisted in writing the client-side JavaScript that determines the players story path depending on what decisions they make throughout the game.
- https://github.com/LiamStewartDev/farQuest

GameHub 🔗
- GameHub is an application that utilizes multiple APIs to create a search engine where users can search for any videogame and where to buy it for the best price.
- I was responsible for designing the layout of the website. This included both HTML pages for the application.
- I utilized the Bulma CSS framework for the styling of the website. At the time, this framework was completely new to me.
